

Summary

A 62 years old widow was referred to stroke unit with left corona radiate infarction probably due to cardiac thromboembolism. She has a past history of Diabetes, Hypertension, and Dyslipidaemia for 8 years duration. Acute management was done at private sector. Post-stroke rehabilitation was done at ward 07, Rhematology and Rehabilitation Hospital, Ragama. Her Barthel index improved from 4 to 13.

Availability of good family support is seen as an advantage her rehabilitation.
