

## **Abstract**

Venomous snake bites are common in Sri Lanka and it leads to high case related mortality and morbidity. Neurotoxicity, coagulopathy and local reactions of envenomation are the main initial manifestations. This is a case of a young male presented with a snake bite who had coagulopathy and neurological manifestation which improved after anti venom serum(AVS). After 23 hours of the bite this patient had worsening of neurological manifestations which was settled spontaneously between next 24 hours without any specific treatment.

**Key words: Russell's viper, envenomation, neurotoxicity, coagulopathy.**
