1. Discuss critically the management of Heroin dependence as practiced at present in Sri Lanka. How would you improve the present approaches to management?

2. Discuss the need for further training of the Primary Health Care doctor in Sri Lanka in the assessment and management of Psychiatric disorders. Outline a plan to train the above doctors in your district.

3. Indicate giving reasons, your recommendations for the list of essential therapeutic drugs for use in:

   (a) psychiatric units of Provincial Hospitals
   (b) Primary Health Care and
   (c) Private Sector.

4. Discuss the role of stress in the aetiology of common psychiatric disorders.

5. Describe the principles of epidemiology and their relevance to psychiatric practice in Sri Lanka.
POSTGRADUATE INSTITUTE OF MEDICINE  
UNIVERSITY OF COLOMBO  

MD (PSYCHIATRY) PART II EXAMINATION  
SEPTEMBER , 1990

Date: 11th September 1990                      Time: 9.00a.m. - 12.00 noon

PAPER II

Answer eight (08) questions.

1. A patient arrives at the Out Patient Department of your hospital in a state of severe excitement and agitation.
   (a) List disorders that might cause such a state.
   (b) Describe your approach to assessment and initial management of such a patient.

2. Write short notes on the following,
   (a) Neuroleptic malignant syndrome.
   (b) HIV - related psychiatric disorders.
   (c) Cognitive therapy.

3. A 16-year-old boy has attempted suicide and you find him to be depressed.
   (a) Describe briefly the likely clinical picture.
   (b) List 5 likely problems in the management of the patient.
   (c) How would you manage this patient?

4. A 12-year-old boy with primary enuresis is referred to you by a pediatrician after repeated attempts at therapy.
   (a) List the methods available for treating this patient.
   (b) Discuss the place of family involvement in the management of this child.

5. Describe briefly the psychiatric disorders associated with the following.
   (a) Parkinson's Disease
   (b) Hypothyroidism
   (c) Epilepsy
6. A 42-year old man after amputation of the lower leg complains of constant pain, demands hypnotic medication at night and is very uncooperative with mobilization.

   (a) Indicate the possible diagnosis.
   (b) What specific advice would you give to surgeons and other staff concerning the management of this patient?

7. 

   (a) List 5 psychiatric disorders that may be associated with the murder of spouse.
   (b) What is the relevance of McNaughton’s rules to such a murder?
   (c) State the advantages and disadvantages of introducing diminished responsibility to the Sri Lankan law in the case of such a murder.

8. 

   (a) List two sexual disorders commonly found in Males and two sexual disorders found in females.
   (b) Outline the principles of treatment of these disorders.
   (c) What special problems are encountered in the treatment of sexual disorders in Sri Lanka?
Answer all five (5) questions.

1. Consider critically what should be the goals for mental health education in Sri Lanka over the next ten years.

2. Discuss the possible effects of environment on mental health.

3. "The category of District Court admissions should be preserved in any amendment to the Mental Diseases ordinance in Sri Lanka". Discuss critically.

4. Discuss in detail the management of the elderly patient with dementia.

5. It has been shown during a two-year follow-up study that the abstinence rate at a special alcohol rehabilitation center was twice that of an ordinary psychiatric unit in Sri Lanka. Comment critically.

Date: 8th October  
Time: 9.00 a.m. - 12.00 noon

PAPER II

Answer all eight (08) questions.

1.  
(a) List the abdominal symptoms commonly associated with psychiatric disorders.

(b) Indicate briefly how these symptoms arise in such disorders.

2.  
(a) List the common epileptic disorders arising in childhood.

(b) Describe briefly the short and long term complications of childhood epilepsy.

(c) Indicate the essential steps in the prevention of such complications.

3. A 40 year old man with Down's syndrome is said to be functioning less well than usual in the last few months. What possible explanations and remedies are there?

4.  
(a) List the different forms of violence in the family.

(b) Describe the psychiatrist's role in the prevention of these.

5.  
(a) List the possible adverse consequences of post-partum depression.

(b) How may these be prevented and managed?
6. List the disorders of movement seen in psychiatric practice and indicate briefly the underlying conditions.

7. (a) List the psychological disorders that may be seen in soldiers in battle.
    (b) Briefly describe their management.

8. Write short notes on,
    (a) Adolescent crisis
    (b) Maternal deprivation
    (c) Family therapy

PAPER II

Answer all eight (08) questions.

1.  
   (a) List 8 common side effects of lithium therapy.
   (b) Discuss briefly how you would monitor lithium therapy.

2.  
   (a) List 6 mental defense mechanisms.
   (b) Briefly illustrate two of them using clinical examples.

3.  
   (a) List the causes of insomnia in an adolescent.
   (b) Outline the management of two of these.

4.  
   (a) Briefly describe the clinical features of post traumatic stress disorder.
   (b) What are the principles of management of this disorder.

5.  An 18 year old student who is preparing for the G.C.E. Advanced Level Examination complains of poor concentration and fear of the examination.
   (a) Enumerate the measures you would take to improve his/her concentration.
   (b) Briefly outline how you would reduce his/her fear about the examination.
6. Briefly outline the management and prevention of the following conditions.
   (a) Malignant Neuroleptic syndrome
   (b) Tardive dyskinesia
   (c) Dystonic reaction

7. A 12 years old boy is brought by his parents with a complaint of poor school performance.
   (a) List 3 possible common causes.
   (b) Briefly outline the management of one of these conditions.

8. A 50 years old man is referred to you having undergone surgery for a fractured femur three days previously. On the surgical ward he is reported to be violent and has had one epileptic fit.
   (a) List the distinguishing features of 3 possible causes of his altered behavior.
   (b) Briefly outline the management of one of these conditions.

PAPER II

Answer all eight (08) questions.

1. (a) A 22 year old man presents to the psychiatric clinic with a desire to change his sex. Outline your management plan.

2. (a) A 38 year old man comes reluctantly to the clinic with his wife. He is reported to be consuming a bottle of arrack a day. Briefly describe how you would motivate him to stop drinking alcohol.
   (b) You are invited to speak by a parent teacher association of a secondary school. Your lecture is titled "How to spot drug taking in Young people". Give the main headings of your lecture.

3. (a.) List the chronic mental (psychiatric) sequel of head injury.
   (b) List the relevant aetiological factors
   (c) Describe the principles of management of chronic intellectual sequel of head injury.

4. An 8-year-old boy who witnessed the killing of his father by a group of armed men is now refusing to go to school.
   He is also reported to be irritable at home and hostile to his mother.
   (a) What is your diagnostic formulation.
   (b) Briefly outline your management.
4. A 30-year-old man presents to you with a history of pain in the throat. She has seen many medical practitioners over the last two years who have tried to reassure her. Her mother died of carcinoma of the oesophagus.

Briefly outline further management.

5. An 18-year-old boy becomes increasingly withdrawn and begins to do his work badly.

(a) List three possible causes.

(b) Outline the advice you would give to the parents if he were to manifest delusions and auditory hallucinations.

6. Cognitive therapy:

(a) List three situations in which it might be useful

(b) Outline the stages for the treatment of a patient with one of these conditions.

7. 

(a) List five common psychiatric conditions in the elderly.

(b) Briefly outline the management of two of these.

PAPER II

Answer all eight (08) questions.

1. A sixty- (60) year old retired public servant is brought to you by the police with a history of exhibiting himself in public.
   (a) List the possible causes that may give rise to this behavior.
   (b) Outline the management of one of the causes you list.

2. A four-year-old boy is brought to you by a mother concerned about his psychological development. How would you assess his mental development?

3. A 50-year-old man is referred to you for accusing his wife of infidelity.
   (a) List four possible causes
   (b) Discuss the underlying psychopathology and the management of the patient (limit your management to one of the causes listed).

4. (a) List the psychiatric presentation of Acquired Immuno Deficiency syndrome (AIDS).
   (b) Outline the principle of counseling a person who has been that he is HIV positive.

5. (a) Briefly give the indications for the use of
   i. Fluoxetine.
   ii. Clozapine
   (b) List the advantages and disadvantages of using these drugs in Sri Lanka.
6. A 10-year-old boy is referred to you for refusing to go to school.
   a) Enumerate the possible causes
   b) Outline the management of this boy.

7. Give 5 clinical situations where depression will be seen in a medical/surgical ward.
   a) Give 5 clinical situations where depression will be seen in a medical/surgical ward.
   b) Outline the management you would recommend to the physician/surgeon in two of these situations.

8. Write short notes on,
   a) Erectile importance
   b) Transsexuality
   c) Transvestitism
   d) Incest

PAPER I

Answer all give Five (5) questions.

1. Discuss critically the need to establish specialist psychogeriatric services in Sri Lanka.

2. What do you understand by a multidisciplinary team in psychiatric practice? Discuss the role of non-medical members on the team.

3. "Schizophrenia is a neurodevelopmental disorder". Discuss the evidence for this statement.

4. Describe the disposal of mentally abnormal offenders in Sri Lanka. Outline any amendments you wish to recommend giving your reasons for them.

5. What psychological difficulties do patients’ experience in trying to cope with cancer and its treatment?
Answer all eight (8) questions.

1. Now would you assess the report of a clinical trial of a drug, which claims to be effective in the acute treatment of depression?

2. A 25-year-old youth has attempted suicide by swallowing an insecticide. The only reason he gives for his behavior is that he is unemployed. The history reveals, however, that he had impulsively resigned from his last job three months ago. Describe how you would assess this patient.

3. Describe briefly the factors, which may impede the resolution of grief following the death of a spouse.

4. What are the features of a panic attack? Describe the known co-morbidity of panic disorder.

5. A 10-year-old girl presents with a history of repeated falls in the morning
   (a) List the possible diagnoses.
   (b) How would you investigate the condition? If you intend to order any special investigations describe the expected abnormalities.

6. A 68-year-old lady presents with a history of forgetfulness, irritability and wandering at night
   (a) List the possible conditions which may give rise to this clinical picture, and
   (b) Outline your management for one of these conditions.
7. You are asked to assess and provide a report to Courts on a 24-year-old employee who claims she has been sexually harassed by the boss. You understand that the boss has denied this allegation and has stated that she has been giving him nuisance telephone calls and sending him anonymous love letters. Indicate the important areas you will focus on during your psychiatric assessment.

8. A 25-year-old unemployed man presents with a history of persistent pain in the right side of his head and body of three years duration. He says that his symptoms followed torture by the police. He claims he was hanged by his feet and later dropped on his right side.

   (a) Discuss briefly the differential diagnosis, and

   (b) Outline the management of your provisional diagnosis.

MD (PSYCHIATRY) PART II EXAMINATION
OCTOBER 1996

Date: 14th October 1996

Time: 2.00p.m. - 5.00p.m.

PAPER I

Answer all give Five (5) questions.

1. What factors are Associated with violent behaviors by patients on a psychiatric ward? What methods should be adopted to minimize such behavior?

2. Describe the law relating to admissions and discharges of persons labeled as “of unsound mind”. Discuss the advantages and the disadvantages of the existing law.

3. Discuss critically the factors, which contribute to child abuse in Sri Lanka.

4. Suicide in young adults is increasing. What may be contributing to this, and what may be psychiatry's role?

5. Outline the causes of brain injury in infants and adults. Describe the long-term sequel.
Answer all Eight questions.

1. Describe the use of Lithium Carbonate in Psychiatry.

2. List the most likely psychiatric disorders that underlie the following presentations. Briefly outline the management of each of the clinical situations.
   (a) "Dizzy Spells" when going out
   (b) A 22-Year-old man complains of inability to sign in front of other people
   (c) A young mother of a one month old baby cannot sleep and worries about the baby's health
   (d) A ten-year-old boy presents with neck movements and throaty sounds.

3. A patient with schizophrenia appears quite untroubled by his condition. How would you justify treatment that he is enforcing unwilling to accept?

4. How do you distinguish between:
   (a) Petit mal and Psychogenic fits
   (b) Loss of memory due to dementia and that due to depression
   (c) Depressive stupor and semicoma

5. A 15-year-old girl was brought to you by the parents with increasing tendency to avoid people. She would lock herself in the room when visitors come and would refuse to 90 to school in public transport. She however continued to attend school. On examination you found her to be somewhat obese and she refused to talk to you.
   (a) What diagnoses would you consider?
   (b) Give the most likely diagnosis, giving reasons.
   (c) What advice would you give the parents?
6. “Paranoid disorders may result in behaviors which worsen them”. Describe what this means.

7. A mother is concerned about her eighteen-year-old son's gradual change in behavior. He spends increasing amounts of time in the room and is very dismissive of the parents. She is worried that he is using heroin.
   
   (a) How would you help her to confirm or reject her suspicions about the son?
   
   (c) What other conditions may account for this behavior?

8. Describe the effects of an alcoholic father on his family.
ESSAY PAPER

(NEW SYLLABUS)

Answer all 5 questions.

1. Discuss how a psychiatrist could assist the courts of law in dealing with mentally abnormal offenders.

2. Discuss the further clinical management of a patient with Major Depressive Disorder who has not responded to tricyclic antidepressant medication.

3. Define "Attention Deficit Hyperactivity Disorder". Discuss critically potential treatment strategies.

4. What do you understand by classical conditioning? Discuss the behavioral therapies used in the management of a patient presenting with agoraphobia.

5. "Hysteria is a myth, a snare, a trap". Discuss this statement critically.
Date: 13th October 1997
Time: 2.00 p.m. - 5.00 p.m.

PAPER I

(OLD SYLLABUS)

Answer all Five questions.

1. Discuss how a psychiatrist could assist the courts of law in dealing with mentally abnormal offenders.

2. Discuss the further clinical management of a patient with Major Depressive Disorder who has not responded to tricyclic antidepressant medication.

3. Define "Attention Deficit Hyperactivity Disorder". Discuss critically potential treatment strategies.

4. What do you understand by classical conditioning? Discuss the behavioral therapies used 'in the management of a patient presenting with agoraphobia.

5. "Hysteria is a myth, a snare, a trap". Discuss this statement critically.
1. A 65-year-old man presents to his primary care physician with disorientation in time place.
   (a). List the possible differential diagnoses.
   (b). Discuss the management of one of them.

2. A 55-year-old widowed housewife presented to the psychiatric out patients department with a history of insomnia. Outline the management.

3. Write short notes on ,
   (a). False Memory Syndrome.
   (b). Dysmorphophobia.
   (c). Automatism.

4. Outline briefly the management of
   (a). School refusal.
   (b). Nocturnal enuresis.
   (c). Poor school performance.

5. Briefly outline the management of the following two conditions
   (a) Pedophilia
   (b) Exhibitionism
6. Describe briefly how

Self care
Informal care
Primary care
Hospitals care

would facilitate the management of psychiatric disorders in a developing country.

7. Discuss briefly the following:

(a). The use of Clozapine in the management of a patient with Schizophrenia in Sri Lanka, who has not responded to typical antipsychotic drugs.
(b). Outline how you would improve compliance in a patient with chronic Schizophrenia, who is being treated with antipsychotic medication.

8. A 28-year-old mother of a 6-year-old child is referred to you by a physician following an attempt at suicide with insecticide. Her husband is unemployed and reported to be abusing cannabis and possibly heroin. She reports frequent marital conflicts.

(a). How would you assess the current suicidal risk in this patient?

(b). What advise would you give to the referring physician? Present your answer in the form of a letter, which should include an outline of your management plan.

MD (PSYCHIATRY) PART II EXAMINATION
OCTOBER, 1998

Date: 12th October 1998
Time: 2.00p.m. - 5.00p.m.

PAPER I

Answer all five Questions.

1. What do you understand by criminal responsibility?
Discuss critically the need for change in the existing lows in Sri Lanka, with regard to criminal responsibility in mentally abnormal offenders.

2. There is no longer a need for tricyclic antidepressants or conventional MA01's in the treatment of depression, following the development of other antidepressant drugs. Critically discuss this statement.

3. "Cultural factors weigh heavily in the presentation, diagnosis and management of mental illness". Discuss critically.

4. Discuss the family and environmental factors that have contributed to an increased incidence of psychiatric disturbance among Sri Lankan children.

5. Describe briefly, the clinical management of a demented patient, who has the following problems.
   a) Incontinence
   b) Aggressiveness
   c) Restlessness at night
   d) Sexual disinhibition

Outline briefly, how would you explain the prognosis of dementia to an adult son/daughter whose father is demented.
Answer all eight questions.

1. How would you establish the diagnosis of autism in a female child, aged 4 years, presenting with delay in speech development?

2. Outline the psychiatric assessment and management of a 39-year-old male presenting with a history of chest pain, palpitation, pain in an arm and fear of death, a few days after the death of a close friend, following a heart attack.

3. Outline the agenda for a one day workshop for primary care medical practitioners, on alcohol related problems in Sri Lanka. Describe briefly the problems you would address in the assessment techniques, treatment and prevention.

4. Note with explanation, five sociological reasons, which may explain why men commit more crime than women.

5. Writes short notes on,

   a) LEWY BODY dementia
   b) Normal pressure hydrocephalus
   c) CREUTZFELD-JAKOB disease

6. Describe briefly, how would you obtain consent from a patient for Electro convulsive therapy. Describe briefly the exceptions to such requirements in clinical practice.

7. Discuss briefly the components of a community psychiatric service that is suitable for Sri Lanka. Outline briefly the job descriptions of various staff members of such a service.
8. According to Beck’s cognitive therapy of depression, three elements of psychological functioning are involved in the maintenance of depression. Describe following:

1) Dysfunctional Assumptions (Schematic)

2) The cognitive Triad

3) Negative automatic thoughts

Name 2 types of negative automatic thoughts and briefly define them.
Answer all five questions.

1. Discuss the clinical profiles of the new antipsychotic drugs and make a cost / benefit analysis to the Health Minister to justify their prescription.

2. Describe the presentation and investigation of a patient with a first-onset episode of mania. Discuss the immediate and longer-term issues in treatment.

3. Discuss the process of remembering. What advice would you give to a student who presents with forgetfulness?

4. Discuss the factors, which may lead to a high rate of readmission to mental health care facilities in Sri Lanka and the steps you would recommend in order to remedy this situation.

5. With the reinforcement of capital punishment in Sri Lanka, the concept of diminished responsibility should be introduced to preserve the rights of the mentally ill. Discuss critically.
Answer all eight questions.

1. How would you differentiate
   (a) Possessed state from multiple personality
   (b) Night terrors from night mares
   (c) Delusions from overvalued ideas

2. How would you establish the diagnosis of Alzheimer's disease in a 60-year-old female presenting to you with a history of forgetfulness?

3. Write short notes on,
   (a) Pathological grief reaction
   (b) Dysmorphophobia
   (c) Neuroleptic malignant syndrome

4. Describe briefly the clinical features and drug treatment of Gilles de la Tourette syndrome

5. Outline briefly the diagnosis and management of an elderly patient presenting with paranoid symptoms.

6. Describe the clinical features of posttraumatic stress disorder.

7. Outline briefly the investigation and management of a four-year-old child presenting with soiling.

8. List the clinical features of Wernicke's encephalopathy. Outline the management.

MD (PSYCHIATRY) PART II EXAMINATION
OCTOBER, 2000

Date: 16th October 2000
Time: 2.00 p.m. - 5.00 p.m.

ESSAY PAPER

Answer all six questions.

1. Discuss the psychological management of Anxiety Disorders.

2. A psychiatrist is consulted as part of a national campaign to reduce suicide in Sri Lanka. Discuss the advice and strategies that might be recommended.

3. A young man suffering from schizophrenia, but with positive symptoms satisfactorily treated, is discharged from hospital to his family in a village. Discuss the arrangements that need to be made.

4. What is the relevance of psychiatry for the identification and management of child abuse in Sri Lanka?

5. A Provincial Director of Health requests you, as a consultant psychiatrist to develop mental health services for the elderly in the province. Describe the services you would recommend in order to achieve this objective.

6. What is "morbid" about morbid jealousy? Describe the psychopathology, treatment and prognosis including forensic aspects.
ESSAY PAPER

Answer all six questions

1. The conventional antipsychotic drugs are now outmoded treatments for schizophrenia. Critically discuss this statement.

2. What are the psychiatric consequences of physical injury and how might mental health professionals become involved in treatment?

3. Discuss the role of psychiatrists in the campaign against child abuse in Sri Lanka.

4. Discuss critically the different approaches used in the treatment of alcohol dependence.

5. Discuss, using case examples, issues relating to the ethical principle of autonomy in the management of mentally ill patients.

6. Community Mental Health Services are not a cost-effective option in a developing country like Sri Lanka. Comment critically.
POSTGRADUATE INSTITUTE OF MEDICINE  
UNIVERSITY OF COLOMBO  

MD (PSYCHIA TRY) PART II EXAMINATION  
SEPTEMBER, 2001

Date: 17th September, 2001  
Time: 1.30 p.m – 4.30 p.m. 

ESSAY PAPER

Answer all six questions.

1. An unemployed twenty-five year old male is just about to marry. He has suffered from Obsessive-Compulsive Disorder since adolescence with severe checking compulsions. He presents to you for the first time for treatment. He has so far successfully concealed his disorder from his partner. Discuss your approach to his management.

2. A 20 year old male with mild intellectual disability (IQ60) lives at home with his 60 year old mother. He is described by his mother as having been placid and cooperative until three months ago. At that time his elder sister married and left the household. Since then he has exhibited aggressive outbursts both at home and in the street. Neighbours have requested that he no longer visit them, because of his aggression.

Describe the principles involved in psychiatric intervention for aggressive behaviour in this patient.

4. Outline trends in suicide in Sri Lanka. Discuss possible hypotheses to explain these trends.

5. Mental Health Legislation impinges on individual rights. Discuss critically.

6. Recently WHO reported that 2/5 of all disability is caused by psychiatric disorders.

   a. Describe how psychiatric disorders contribute to disability.

   b. Describe how psychiatric services could be organized to reduce such disability.
ESSAY PAPER

Answer all six questions.
Answer each question in a separate book.

1. "Non Governmental Organizations of the province could be utilized effectively to improve the psychiatric services to the community". Discuss this statement critically.

2. Outline the types of psychotherapies.
Discuss the advantages and limitations of any two of the therapies that you have mentioned.

3. A recently widowed, 60 year old general practitioner, refers himself to you and complains of poor sleep and failing memory. He also suffers from poorly controlled NIDDM and essential hypertension. What are the main management and ethical issues presented by this patient?

4. You are asked to examine a 60 year old man in a surgical ward. He has undergone abdominal surgery (cholecystectomy for gallstones) three days earlier. He is now reported to be sleeping poorly, is agitated, and is expressing suspicions about the staff. Discuss your assessment and management of this patient.

5. Discuss the main strategies in the psychosocial rehabilitation of persons with schizophrenia.

6. You are appointed as Psychiatrist to Moneragala district. Medical Officers in Mental Health inform you that they have observed a recent rise of the following problems among the young: Substance abuse, school dropouts, teenage pregnancies, and suicides. Discuss how you would develop a youth mental health programme to address these issues.
1. "Provision of psychiatric services by the government sector needs reform, within the next five years". Discuss this statement and describe the steps you would suggest to improve service delivery.

2. A 55 year old male who has been suffering from a schizophrenia, drowned his son in a waterhole in his paddy field. At first he denied but later admitted and said he did so in order to save his son from being tortured by his brother in law.

Discuss the assessment of this patient with a view to submitting a report to the courts regarding his fitness to plead and criminal responsibility.

3. Your government is proposing the setting of a public health policy target to reduce the suicide rate in people with mental illness by at least 33% over the next 5 years. Write notes on the issues raised by this proposal.

4. How would you manage a child presenting with headache, referred to you by a Paediatrician?

5. A 35 year old lady presents to your clinic, crying. She says her husband drinks regularly. She is being accused by her husband of having an affair with the next door neighbour. She requests a drug to be given to her in order to give to her husband, without his knowledge. Discuss the relevant issues in the assessment and management of this problem.

6. Discuss the range of psychological interventions with their underlying principles, which may be used in the following :-

   6.1. agoraphobia
   6.2. obsessive compulsive disorder
   6.3. eating disorders
Answer all six questions.

1. Discuss the statement "Atypical antipsychotics should be used as a first line treatment for psychosis in Sri Lanka".
